15	2027-02-10	Miriam Richter		Everyone else		Moritz Reinel	Retrospective
Product owners, software developers, and Scurm Master are set and ideally don't change over time; the critical part is the Release Manager role you need to define here							

Goals	The team aims to meet all of the teaching team's requirements, meet all deadlines on time, and deliver a high-quality open-source MCP server that provides tangible added value for AIlixir.
	Every team member will actively expand their technical or organizational skills while fostering a supportive and psychologically safe working environment.
Meeting norms	Team members shall arrive on time for all scheduled meetings.
	Team members shall keep their video cameras turned on during online meetings to facilitate engaged, face-to-face collaboration.
	In case of unavoidable absence, members will inform the team on Slack and notify the team and teaching team via email as early as possible.
Working norms	High-quality code documentation should be provided, including graphical documentation and, for example, UML diagrams.
	For the purpose of repository hygiene, there should be separate feature branches, and at least one reviewer (depending on the number of authors or the scope of the feature) for each feature merge. Direct pushing or force-pushing to the main branch is strictly prohibited, and all pull requests require at least one peer approval and must pass CI checks.
	Team members may use AI assistance, but every author shall be capable of explaining their committed code line-by-line ("No AI slop").
Coordination norms	Team members shall distribute tasks fairly and transparently across the team during sprint planning.
	Team members shall continuously update the status of their work items on the GitHub Project Board to maintain visibility
Communication norms	Asynchronous communication will take place on Slack. Members shall communicate their availability during the sprint in advance.
	Members shall respond to Slack messages within 12–24 hours on working days (same-day response), and faster leading up to major project deadlines.
Consideration norms	Team members shall provide constructive and polite feedback during code reviews and respect diverse opinions.
	Members shall communicate mistakes early and transparently without fear of judgment.
Cont. improvement norms	The team shall actively participate in sprint retrospectives, providing honest input to improve team processes.
	Team members shall maintain clean inline code documentation and graphical/UML diagrams to ensure continuous knowledge sharing.
Rewards	Upon successfully completing milestones, the team will celebrate together with a shared team drink (virtually or in person).
Sanctions	Unexcused tardiness to meetings or unannounced missed deadlines shall be sanctioned with 5 to 20 jumping jacks (scaled by delay) at the start of the next team meeting.

Product Vision	Project Mission
An open-source, AI-enabled healthcare integration layer that matches personal health journeys with relevant, qualitative medical insights, helping patients better understand, track and navigate their individual condition.	To design and implement a Model Context Protocol (MCP) server for the mobile Allixir application that matches synthetic patient journeys with qualitative sources (PubMed, podcasts, literature) using keyword, graph, and LLM-based summarization to deliver clear information back to the patient.

How to play planning poker							
1. Everyone type their number into their value field, don't hit return yet							
2. Someone, perhaps a product owner, count down 3.. 2.. 1..							
3. Then, everyone hit return to submit their value
